

## **My Family Vacation on the Moon**

### **Mini-project, Computer Literacy**

**Ms. Mitchell**

For this mini-project, we will be imagining that our family was taking a vacation/camping trip on the Moon! Think about creating a series of snapshots that include pictures of people (they don't have to be your real family!) doing camping style activities...on the moon!

Imagination is a big plus on this project, and I will teach you techniques as we go along.

There are, of course, a few rules:

No spacesuits on the people in your family, although they can meet someone in a spacesuit on the moon.

Your final images can include spaceships, nebulas, aliens, camping equipment, tents, sleeping bags, etc.

Ask yourself: what kinds of activities could my family do on the moon?

Google Image Search for photos like: moonscapes, craters, moon landing, people doing camping activities. Save these to your Semester 2 folder in Computer Literacy; you will be using them in Photoshop to make your final pictures.

Next steps? Follow along with what Ms. Mitchell teaches and you will be fine...
